

Health professional Research Survey

Nutrition in NETs

Health professionals who treat or manage patients diagnosed with a neuroendocrine tumour (NET) are invited to participate in a research project via a short online survey (5-10 minutes).

This survey explores the experience of health professionals regarding nutrition issues and management of NET patients, and is part of a larger research project exploring the nutrition related symptoms, complications and quality of life in patients diagnosed with a NET.

Health professionals working in the following areas are invited to complete the online survey:

- Medical Oncology
- Radiation Oncology
- Surgical Oncology
- Gastroenterology
- Endocrinology
- Nuclear Medicine
- Cancer Nursing
- Dietitians

Access the survey here:

<https://is.gd/netnutritionhpsurvey>

Please note all survey responses will be anonymous and name or name of workplace will not be recorded. Consent will be assumed upon completion of the survey.

This research is a collaboration between staff from the Neuroendocrine Unit at Peter MacCallum Cancer Centre and the University of Melbourne, Australia; and is supported by the Department of Health and Human Services through the Victorian Cancer Agency and Austin Health. The Coordinating Principal Investigator will use results as part of their PhD studies.
